

Wireless Solutions for Real Estate

Customized Wireless Voice and Data Solutions

To help property owners maintain a competitive edge, the Custom Solutions Group (CSG) of CSI provides complete in-building wireless solutions. CSG provides seamless, high-quality and reliable wireless turnkey solutions for any size office building or campus environment. With over a decade of experience, CSI can build an end-to-end solution to meet the wireless communication needs of building owners, property managers and tenants, now and in the future.

Why Go Wireless?

The commercial real estate industry is highly competitive. Property owners are forced to consider how to provide the services that tenants desire, property managers need, and the government mandates, all while increasing the bottom line. Wireless voice and data technology has become an efficient and cost effective solution for many businesses and tenants who demand coverage in their office space. The marketability gained by implementing an in-building wireless voice and data solution is proven to realize profit, as well as a high ROI for commercial real estate property owners.

Benefits

- An investment in an in-building wireless solution can translate into 5 times return on the value of your building*
- Maintain a competitive advantage by meeting the tenant's wireless needs
- Create emergency management solutions and expedite response time in urgent situations by delivering critical information wirelessly
- Provide critical communication for emergency response
- Increase productivity of property management team with anytime, anywhere wireless voice and data access
- Possess scalable solutions that can evolve to meet future technology requirements
- Create a wireless infrastructure that can support building automation
